

Department of Atmospheric & Oceanic Sciences

Newsletter 2012

A Message from our Chair

Holiday Newsletter

December | 2012

Welcome to the 2012 Newsletter! The Department of Atmospheric and Oceanic Sciences at McGill has a long tradition of pioneering research and teaching in meteorology

dating from the establishment of first meteorology group in 1856 and McGill observatory in 1862 to the great "stormy weather" radar research group who established leading radar research in the midst of the Second World War.

Today our department's research is quite diverse and our expertise can provide incoming students the opportunity to learn from experts in wide range of research domains such as physical meteorology, dynamics, radar and satellite remote sensing, physical oceanography, air-sea ice/snow-ocean interactions, atmospheric chemistry and physics as well as air pollution and climate. Research activities in our department are challenging and yet our working is collegial and friendly providing wide opportunities for personal and academic growth.

The Department of Atmospheric and Oceanic Sciences is located in Burnside Hall in the downtown Montreal Campus. The department is equipped with state-of-the-art computational, observational and laboratory facilities. Part of the department's infrastructure also includes the Marshal radar facility in the West Island of Montreal.

Climate change is arguably the most important challenge of our time. There is an urgent need to address Earth system climate uncertainties

with comprehensive data analysis to enhance our quantitative predictions of climate change, extreme weather and air pollution. And, we are addressing such challenges, together.

During this year, we commenced a multidisciplinary research initiative bringing together scientists, engineers, medical researchers, specialists in Weather, Air Quality, Climate and Health; we called it **CANADA WATCH**. It currently includes 19 Quebec and Canadian Universities (and counting), while involving hundreds of partners from governmental, and private sectors both nationally and internationally.

I invite you to kindly take a few minutes to hear from your old friends, meet our new members, hear about our students and faculty achievements, and join us on our journey. I wish you and your loved ones a wonderful holiday season!

Parisa A. Ariya
James McGill Professor and Chair of the Department

Department News

2

Like the atmosphere and the oceans, our department is dynamic and ever changing. We are happy to keep you updated with the newest developments in our department.

We are very excited to announce the inauguration of a new undergraduate laboratory course and teaching laboratory for our undergraduate students. The laboratory will allow our students to gain valuable field experience.

In the past year we also renovated the undergraduate lounges to promote a more collegial atmosphere for our students.

We would also like to express our congratulations to Prof. Pavlos Kollias who was recently promoted to associate professor of Atmospheric and Oceanic Sciences.

Of course, we would also like to congratulate our new graduates:

Ph.D. Degrees

Farid Ait Chaalal
Thomas Milewski
Jasmine Remillard (NSERC)
Arunchandra Chandra

M.Sc. Degrees

Marc-Olivier Brault (FQRNT)
Etienne, Dunn-Sigouin
Jonathan Gadoury
Marcel Rodney
Kevin Bowley

B.Sc Degrees:

Mélany Belzile
Amélie Bertrand
Stephanie Hay
Wan Ting Katty Huang
Eric Notarangelo

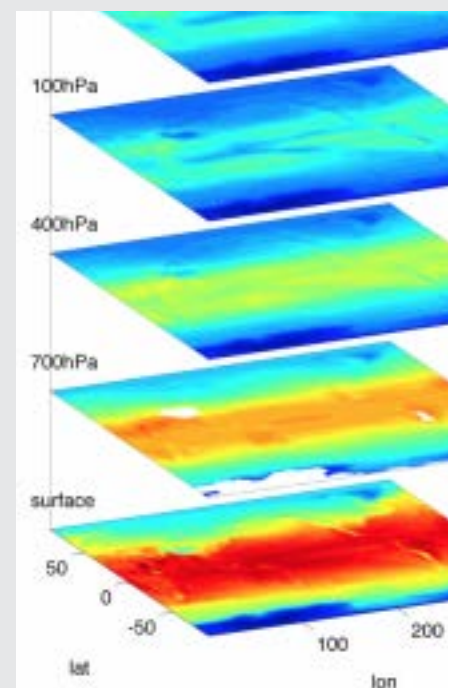

Honors B.Sc.

Stéphanie Potvin
Lisa Simla
Sophie Splawinski

New Faces

Yi Huang (PhD, Princeton) is an atmospheric physicist interested in climate variability and energetics. He uses satellite data and climate models to understand the forcing and feedback mechanisms that drive global and regional climate changes.

Awards and Distinctions

Sophie Splawinski receives the Undergraduate Award in Agricultural & Environmental Sciences category with her paper entitled

“The role of anticyclones in replenishing surface cold air and modulating severe freezing rain event duration.”

Splawinski’s winning paper has been a labour of love almost since her arrival at McGill. “It has been an ongoing project for three years ago when I started working with John Gyakum,” she said. “The idea was trying to figure out a way for meteorologist to better predict the duration of freezing rain because if it lasts an hour there’s not usually much of a problem but if it lasts longer, it can cause a lot of damage – like the big ice storm in 1998.”

Ice storms form when a thin layer of cold air is overlaid by a warmer layer. When snow passes through the warm layer, it melts, only to freeze again as it falls through the cold below. Splawinski says conditions along the St. Lawrence valley are ideal because the shape of the valley will naturally hold the cold layer in place.

As one of the UA winners, Splawinski has been invited to Dublin from Nov. 7-10, to attend the UA Summit where she and the other winners will receive their awards from the President of Ireland, Michael D. Higgins

We are also pleased to announce that **Dr. John Gyakum** has been awarded the 2011 Patterson Medal Award for distinguished service to meteorology in Canada. For over 30 years, Dr. Gyakum has been a leading member in Meteorological research and teaching both here in Canada and internationally. The selection committee for this award was very impressed with the breadth of support for Dr. Gyakum that came equally from academic and government representatives in meteorology. Dr. Gyakum has not only been extremely effective in research, but also in teaching undergraduate and graduate students, and outreach to the general public.

The Patterson Distinguished Service Medal, presented since 1954, is considered the most pre-eminent award recognizing outstanding work in meteorology by residents of Canada.

This prestigious award was presented to Dr. Gyakum on May 30, 2012 during the Annual CMOS Congress in Montreal, Quebec.

New Faces

Dr. Kirshbaum earned his Ph.D. in Atmospheric Sciences at the University of Washington. His research focuses on the mechanisms and predictability of convective storms, particularly those that form over complex topography. The principal objectives are to advance the conceptual understanding of these processes and to improve their representation in weather and climate models

Research Chairs

Prof. Pavlos Kollias' (Canada Research Chair Tier II) remote sensing research focuses on "cloud problem", i.e., the understanding of the microphysical, dynamical and radiative processes that act at the cloud scale and their accurate representation in numerical models is the central theme of my research. In particular, boundary layer clouds, precipitation initiation, cloud entrainment and turbulence are focus areas of current and future research.

Prof. Peter Yau's (NSERC Hydro Quebec) research involves various aspects of cloud physics and dynamics. They have developed simple and complex models to study the interactions of various physical processes in convective clouds. Our recent work includes simulation of the mechanism of mixing, and entrainment in cumulus clouds, the interactions involving radiation and cloud dynamics, and the effects of stochastic condensation and droplet collision in turbulence on the size spectra of cloud droplets.

Prof Parisa Ariya's (James McGill) atmospheric and interfacial chemistry research currently is focused on

understanding physical and chemical processes involving aerosols. Ongoing research includes aerosol formation processes from gas-phase reactions, gas-particle partitioning, aerosol transformation, aerosol-cloud interactions, cloud nucleation microphysics, development of novel technique for ultra-trace gases and particles using nano and micro-aerosols, and development of green techniques for pollution remediation using particle nano-technology.

New Faces

Jaime Palter (Duke University) is a physical oceanographer who studies the large-scale ocean circulation and its influence on climate and biogeochemistry. She has experience making observations, synthesizing large publicly-available global data sets, and analyzing general circulation models. Her work has shed light on the supply of nutrients to low latitudes and the formation and circulation of water masses, a principal means by which the ocean and global climate system feed back on one another.

Our department is highly respected and influential in the fields of atmospheric and oceanic sciences. Here are a few of such papers

Prof. Parisa Ariya

Opportunities to Give

8

Professor Lawrence Mysak has provided a generous endowed graduate fellowship, in memory of his parents. This fellowship offers a stipend to a graduate student in atmospheric or oceanic sciences every year

The awards within the Department of Atmospheric and Oceanic Sciences were made possible by the private philanthropic support of alumni, faculty and staff, as well as friends of the University. Private support is responsible for the majority of McGill's student awards.

If you wish to contribute to the Department of Atmospheric and Oceanic Sciences, please visit the McGill Development and Alumni Relations secure online form at:

<https://www.alumni.mcgill.ca/aoc/online-giving/>

Please make sure that you write a note that your donation is to Department of Atmospheric and Oceanic Sciences.

If giving via the online pledge form, please indicate which award, prize, fellowship or memorial fund you would like your gift designated to under 'Other' in the 'My Gift' section of the form, **while referring to the Department of Atmospheric and Oceanic Sciences.**

Alternately, you may send your donation to the below address. Please remember to include a mention of which award, prize, fellowship or memorial fund you would like your gift designated to.

McGill Development and Alumni Relations
RE: donation to Department of Atmospheric and Oceanic Sciences.
1430 Peel Street Montreal, Quebec H3A 3T3
Tel.: 514-398-5000

If you are interested in establishing a named award, please contact Toby Moneit at (514) 398-8894 for more information. **Donations, regardless of size, are very much appreciated. Please make sure that you write a note that your donation is to Department of Atmospheric and Oceanic Sciences.**
